

## EMEN 6830 Course Syllabus

### Course Description

The Project Management Capstone represents an opportunity for the student to evaluate the project management practices in the student's work unit or company or in another organization. The student must identify the strength and weaknesses of the application of the major project management processes as outlined in the Project Management Body of Knowledge (PMBOK). Opportunities for improvement and methods for implementation are expected. Includes review of PMI's OPM3 maturity evaluation or Kerzners PMMM.

Registration for EMEN 6830 requires instructor approval.

Students who apply for degree seeking status can count EMEN 6830 as a technical elective.

Within the degree program, EMEN 6830 cannot be substituted for EMEN 6800, the Capstone Project.

### Prerequisites

EMEN 5030 (Project Management Systems), EMEN 5032 (Advanced Topics in Project Management), and acceptance into the Project Management Certification option.

### Course Objectives

Using learning from EMEN 5030 (PM Systems) & EMEN 5032 (Advanced Topics in PM) move to Executive Leadership thinking in Project Management.

Use established models to evaluate current state of your company and write a best practices statement for your type of business. You develop a

plan moving your company from current state to best practices. Emphasis must be on making your organization more effective and efficient. The plan should be written from an executive perspective, addressing issues in linking activities to the company's strategic plan.

Students must present this plan to senior management.
